

1.

Deposit War Room is a web-based legal-tech prototype designed to help tenants and landlords organize and resolve security-deposit disputes. The system converts a complicated deposit disagreement into a structured workflow involving case intake, evidence management, deduction evaluation, negotiation, mediation, and settlement generation.

The platform is specifically designed around rental disputes in Karnataka, with reference to the Karnataka Rent Act, 1999. It emphasizes evidence-based decision-making rather than automatically declaring a deduction lawful.
